Pill Pal

An easy way to track medications

Health is the essence of life

Created with data from the FDA and numerous technologies. Pill Tracker provides users the ability to search, create a profile, track and keep records of the drugs they take.

Why Pill Pal?

As Mark continue into his early years of being old, he realized he was visiting the doctor's much more often. However, time and time again, he could not provide an adequate answer about his recent medication / drug history. The doctor continually told him how important it was to keep track of such.

Mark struggled to do so until the Pill Tracker app was downloaded to his iPhone. He now adds and keeps historicals of every drug he has taken and/or currently uses.

Technologies Used

- → **Javascript**

- → **Handlebars.js**

- → **FDA API**

- → **Bootstrap**

- → **Passport**

- → **Sequelize**

- → **Heroku**

- → **MySQL**

- → **Node/Express**

- → **Font Awesome**

- → **Animate CSS**

What people are saying

With this app, I'm confident to go to the doctor now

Wendy Writer, CA

Pill Pal saved my life

Ronny Reader, NYC

Awesome app! Time saver.

Abby Author, MD

My Pill Pal

Challenges

- Handlebar Integration
- Database Management
  - data allocation
- User profile Integration
- Github [Push It](#)
- Search Optimization
- Error Handling

Skateboard to Scooter

- Mobile phone deployment
- Data Export
  - Digital file
  - Print
- Prescription Medicine search capability
- Email / Text notification
  - Remind users to take particular drugs
- Drug Warnings
  - If user is taking two particular drugs that do not work well with one another
    - Provide warning of such and potential effects
- ...lunr
